

**A STABLE PARENTERAL FORMULATION OF LEVOMEPRMAZINE AND
A METHOD FOR STABILIZING SAID FORMULATION**

ABSTRACT

The present invention relates to stabilized formulations for parenteral administration comprising a therapeutically effective amount of levomepromazine or a pharmaceutically acceptable salt thereof, and selected stabilizers in an amount effective to stabilize said formulation, to stable terminally sterilized levomepromazine formulations, to methods stabilizing pharmaceutical formulations comprising levomepromazine, and to methods of treating disorders using said formulation.
